

SHARP

Engineered
for a better wash.

Sophisticated laundry solutions for modern families.

Sleek, stylish and packed with features, Sharp's large capacity washing machines are a perfect fit for today's contemporary lifestyles. With a wide array of programmes and settings to choose from, every wash can be customised to meet your specific needs. Best of all, you can now wash big loads and bulky items such as curtains and blankets in the comfort of your own home. Get ready to experience a refreshingly new way of doing laundry with Sharp.

DD Inverter Motor

This advanced brushless motor rotates the drum without a belt and pulley system. Power is delivered directly from the motor to the drum which helps improve energy efficiency.

Less Vibration, Less Noise.

Innovative DD Inverter technology ensures an exceptional washing performance while reducing vibrations and noise levels. Other key features include lower energy consumption as well as greater durability and reliability.

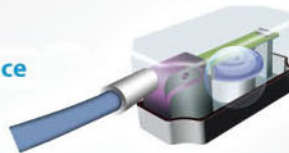

Air Bubble⁺

The air bubbles that rise from the bottom, with sufficient water flow, help remove dirt from clothes effectively. Upon contact with clothes, these bubbles “burst” to unleash the detergent’s cleaning power. Millions of tiny bubbles penetrate the fibres and then disperse to generate impulse energy for a more powerful and effective wash even in cold water. These air bubbles also minimise damage to clothes by reducing unnecessary friction not only between clothes, but also between clothes and the drum.

67% improvement in washing performance

Eliminates the need for preliminary washing.

50% reduction in detergent residue

Cleans out smelly undissolved particles and residue of detergent.

Air bubbles help dissolve the detergent thoroughly, which in turn reduces residue.

40% reduction in damage to clothes

Even the most delicate of fine fabrics can be safely machine washed.

As shown by comparison performance tests on the damage and shrinkage of clothes.

	Air Bubble Washing	Normal Washing
Damage to clothes (%)	1.15 	9.4 ~ 10.3 
Shrinkage of wool (%)	1.3	6.7 ~ 29.7

* Based on internal test.

Water Wave

Pressing the Water Wave button lets you adjust the water flow intensity to suit your laundry requirements. Choose the powerful setting for hard and thick items; and delicate water wave for softer, more delicate pieces.

Intelligent Waterfall System

Strong water currents from three directions increase the dissolution rate of detergent in the wash tub. This reduces the amount of detergent residue left behind on clothes that may cause skin irritation or allergic reactions. Enjoy the peace of mind that comes from knowing that your laundry will always be hygienically clean after every wash.

With SHARP Intelligent Waterfall System

Detergent remaining on clothes

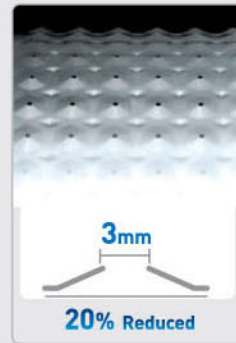

With normal washing

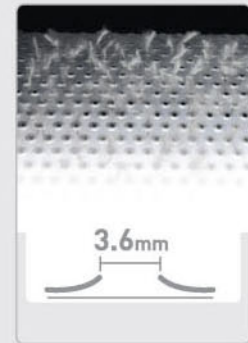

Hexa Drum

The distinctive hexagon pattern on the inner surface of the drum has been specially designed to be gentle on clothes while optimising cleaning performance. The water exit holes are considerably smaller than conventional drums, which helps prevent fabrics from snagging or fraying. Additionally, this unique surface also minimises fabric damage caused by friction, especially during the spin cycle.

Hexa Drum

Conventional Drum

Hexa Drum

Conventional Drum

Individual detergent / fabric softener compartments

Thoughtfully located at the front of the machine alongside the control panel, the pull-out dispenser drawer comprises dedicated compartments for detergent and fabric softener.

Nano Silver Pulsator

The silver ions (Ag^+) released by the Nano Silver Pulsator effectively inhibit bacteria and mould growth, assuring you of clean smelling clothes always.

Auto Start After Blackout

There is a memory chip in the PCB that memories washing status at any times. When the washing machine under the condition of abnormal power cuts, it will recover to work and continue to run the same programme automatically when the power restored.

Magic Filter

The long and wide Magic Filter captures lint more effectively so you don't need to worry about lint residue on your freshly washed clothes.

With Sharp Magic Filter

Without filter

A variety of programme options with convenient Jog Dial

Easily customise wash cycles with a variety of programme options. Every cycle can be optimised based on the amount and type of laundry to be washed. So you can be sure even the most delicate of fabrics are gently and thoroughly cleaned.

Standard Programmes

Normal

Fuzzy logic control automatically determines the settings that will give you the best wash results. Choose this for everyday items such as shirts and skirts, as well as mixed loads.

Heavy Duty

Great for heavily soiled items such as workwear and jeans.

Wool

The gentlest cycle for items of clothing that require a delicate touch.

Blanket

A dedicated setting for large and bulky items, including blankets, comforters and bedsheets.

Night Time

A quiet cycle that lets you do your laundry at night without bothering anyone.

Memory

Press the Memory button and select your desired course. Then press the Start/Pause button, after which the programme data will be saved automatically for future loads.

Intelligent Programmes

Speedy

Get your washing done in quick time! Perfect for a few lightly soiled items such as the blouse and pants you want to wear in a hurry.

Baby Care

Rinses laundry more thoroughly to remove any detergent residue that may irritate a baby's sensitive skin.

Sport Shoes

A useful feature that takes the hassle out of cleaning your sneakers.

Sports Wear

Use this to clean and refresh garments specifically designed for sports.

Tub Clean

Run this cycle once a month to reduce build-up of mould and germs.

Others

Soak

Select a soak time of 30, 60 or 120 minutes to remove stains from collar and cuffs.

Reservation

Reserved time indicates the time to finish the operation; selectable from 1 to 18 hours.

Rinse

Use this function to specify the number of rinses.

Child Lock

Prevents a child from playing with the controls while the appliance is in operation. To activate this function, press the "wash" and "rinse" buttons at the same time for 3 seconds.

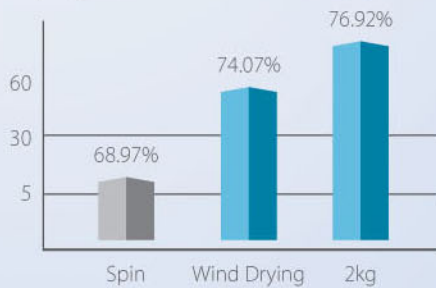

Wind Drying System

An eco-friendly and non-heating system that allows air to flow in and out of the washing machine through the air filter to help laundry dry faster. As the wash tub spins, air from the outside is drawn in by the centrifugal force to improve drying efficiency by 61.5% and reduce drying time by two hours. This eliminates water from the tub and prevents bacteria from growing.

Drying effect of the Wind Drying System

• T-Shirt

Clothes are approximately 77% dry immediately after wash. Speeds up the total drying time.

* Based on internal tests on T-shirts.
